gain, for the proverbs say: "agreement is law"; "one ties the oxen by the horns, the man by his word." But the rugged individualists can also quote proverbs to show the dangers of depending upon others: "better a threshing floor small but your own"; "the donkey owned in common is eaten by the dogs"; "the wolf has a thick neck because he has to work alone." 476 539

Perhaps the simplest form of mutual aid is found in the case of two farmers, each of whom possesses but a single animal. They take turns using both animals to pull a plow or to do some other task where a team is needed. These partners are often called *smichtes* or *sebroi*. The Yannes described in an earlier chapter, who was disconsolately waiting for his partner to finish with his horse so that he could take the team to his own fields, was engaged in this kind of mutual aid. In Epirus, for instance, those with a single animal are called *monovodoi* (or single-oxen farmers), and each tries to join up with someone else in order to have a team available when needed. Similarly, someone with a donkey or two lends his animals to another farmer who needs to haul his cereal or hay from the fields or to market, in the expectation that he will have the use of the borrower's animals when in similar need. 476 492

Somewhat more complex in detail but similar in type are the arrangements that shepherds make concerning the care of their flocks and the distribution of the produce, which was mentioned earlier in the description of the changing life of the shepherd. 476 233

Mutual aid also extends to the exchange of agricultural labor, as in the case of the potato diggers. It can also occur between two families who throughout the work season combine their labor resources, culminating in tremendous output at harvest time. Or labor can be repaid by some other kind of service, as was the case in Malakassa (Attica), where the president of the commune went to the coffeehouse and said that he needed some help in harvesting a crop. Sixteen men from the coffeehouse went along to aid. When we asked the coffeehouse proprietor what these men would receive in return we were told, "The president has a cart and will help each of these men haul in stuff from their fields when they need him." 476 241 [493]

But there are times when much help is needed for some special event which does not recur frequently in the life of an individual family. Here the traditional "working bee" is assembled. For example, a family decides to plant a new vineyard or to put up some kind of a building. It calls upon its neighbors and relatives for help, feeds them well, and eventually pays back the labor provided when called upon by those who contributed. We found mutual-aid groups also busy making cheese for their own use and for sale or digging clay which they worked into home-made brick. 476 [339]

Women, however, seem to be more fully involved in a wide variety of mutual-aid arrangements. They may help each other with certain household chores — carding wool, baking bread, carrying fuel (*pournari* [573]

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

476 branches) from the hillsides to the house. But the most frequently described and the most romantic arrangements are the *nychteria*, or the groups of 573 women who work together in the evening:

> In the nychteria women help each other finish lighter types of work such as carding, the breaking and cleaning of almonds, cornhusking, kneading of ring [562] biscuits, and the like. In these nocturnal pursuits in certain places customs are [574] strict and men are strictly forbidden to participate. Because this type of work [535] is housework and is carried out in the late hours of the day, it usually takes the form of a social gathering. Drinks and roasted chickpeas are offered, jokes [533] are told, games are played, stories and anecdotes are told, and there is singing and dancing.[1]

[372] Once in a while this dancing may last until dawn. In the summertime, especially, the women gather in the village lanes and spin by the light of the moon or a torch of resinous wood.

476 When a woman, whose husband is dead or off in the army, needs help which no kinship group can provide, she will go to the head of some other [589] family and say: "My son has gone into the army. I have only daughters. If you will help me in man's work my daughters will help you." They then become *kollegoi* (colleagues or partners) and carry out the agreed-upon obligations.

These examples are not intended to cover the wide range of mutual-aid [226] activities, but they serve to highlight their main features. Fishermen have [241] numerous arrangements for helping one another; farmers may rent a field [422] and work it jointly, or even own olive or nut trees in common. In general, these mutual-aid arrangements are viewed as quite different from landlord-tenant contracts which occurred in many forms before the land redistribution in the 1920s. Those tied together in mutual-aid agreements think of themselves as coequal and not as superior and subordinate partners. Nor do these mutual-aid traditions ordinarily apply to cases where money alone is given as full payment for services received. Instead, they make it possible for villagers to meet many of their important needs without having to pay money for services rendered. The mutual-aid practices discussed here differ also from what might be called philanthropy or deeds done for "the good of the soul" which will be looked at more closely in connection with the villager's religion.

[157] Beyond any question, there is a strong strain of cooperation even among the individualistic Greeks. Although somewhat overidealized, the following comment by T. K. Papaspyropoulos about his Peloponnesian village portrays the essence of mutual aid there:

> When somebody gets sick everybody goes to visit him and look after him. When a young girl gets married all the village goes and helps. When they sow, plow, winnow, or do any other village tasks one person helps the other.

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

the relative upon whom he might need to call at a later date. Many men are careful to visit two or more shops from time to time "so as not to offend any of the proprietors." Also, as one informant put it, "The peasant comes from the field, washes up, goes for a drink to a coffeehouse where he might be tied by blood, but in order to do business he goes to other coffeehouses to find people with whom to arrange use of animals for plowing, etc., and will stop for a drink with these people."

275 571 573

Anyone trying to understand the sociology of Greek village life needs to pay special attention to these coffeehouse groups. First of all, the regular patrons of each coffeehouse can be viewed as a group whose members possess certain bonds in common. They have heard many of the same stories; they have learned to react in almost the same way to the buffoon, the over-important person, and the fellow villager constantly seeking sympathy. Although they may frequent a second coffeehouse, they are apt to feel a primary loyalty to their first choice and will find any number of reasons to justify their opinion that it is the best coffeehouse in the village.

275 573 609 242

This general group, however, most of the time is broken down into cliques, varying in size from two during the day to as many as seven persons by evening. Each group has its own informal leader. According to Photiadis: "The informal leader in the coffeehouse gives the other members of his clique group his advice and the satisfaction that they are associating with a person of higher status, while he has the satisfaction of performing his role, the dynamic aspect of his status, which is his reward." Therefore, when some outsider, such as an agricultural agent, approaches the farmers at a particular table, the informal leader considers him a rival. "The agent is a person of higher status who can talk about things the others cannot. This exclusive selling of ideas makes the informal leader feel that his authority is lowered in the eyes of his subordinates, and as a result, he fears that he will lose the satisfaction he has had." No wonder, then, that he is very likely to oppose the ideas which the agricultural agent is trying to advance.

275 573 521 208 203

Of special interest is the way news spreads from one clique to the next as part of the community-wide decision on some proposal new to the village. Photiadis takes as an illustration the use of a new insecticide which had been demonstrated by the agricultural agent to a number of farmers earlier in the day:

> The cliques which have members who have seen the demonstration will start discussing the matter and, after a series of objections and agreements, they will probably reach a decision or have split decisions. The opinion of the informal leader during this discussion has a considerable influence on certain members.
>
> Around the table of each clique there are usually one or more persons belonging to other cliques, or there are isolates sitting with the clique. These "isolates" . . . often move from table to table exchanging ideas or presenting the

1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

decision of the previous group as their own. The store owner and the waiter, who know everyone's business, present the opinion of the group on the matter while they are serving them. In this way the uninformed cliques are informed of the matter and the others have a new aspect of the topic for discussion if it differs from their own. Through this process, each clique's opinion diffuses through the coffeehouse. The rate of this diffusion varies according to the importance of the topic. If the subject is more important than usual, the leaders will find some means of discussing it among themselves, or a number of people may ask the opinion of informal leaders belonging to other cliques.

But the matter does not rest there. Many people move from one coffeehouse to another and introduce as their own the general consensus prevailing in the coffeehouse from which they have come. Thus, the men of the community tend to form a "public opinion" on a matter, frequently basing their decisions on either flimsy or inaccurate evidence. They prefer to be psychologically related to what others in their clique or coffeehouse think rather than to be individualistic and out of step with the rest. Truly, there is in Greece a "coffeehouse jury."

The Coffeehouse as a Mixed Blessing

The coffeehouse has its critics throughout Greece. Those responsible for improving the economic situation cite the economic disadvantages resulting from the unproductive expenditures at the coffeehouse as well as the many hours wasted there. This is recognized as a regional matter, for in many villages, such as those on Mount Pelion near Volos, one seldom sees people at the coffeehouse during the day. But in many of the mountain villages elsewhere, where economic opportunities are particularly lacking, more time is spent in such places.

Some oppose the coffeehouse on moral grounds. From time to time wives berate their husbands — not for economic inefficiency — but for drinking too much ouzo or for gambling away money that the family desperately needs. It also is said to corrupt youth. The nomarch of Thessalonike, Kostis Koukourides, pointed out: "The coffeehouses are our misfortune. I have two objections to them: the lost time and the bad habits of drinking and gambling. They also corrupt the youth, for in earlier times a boy had to be twenty-five years of age to go into the coffeehouse and would then never sit with the elders. Now he does so, which shows that he is losing respect for his elders."

Schoolteachers and agricultural-extension workers, although admitting that the coffeehouse can at times serve as a useful forum, generally think of it as a place where much misinformation spreads. It irritates an agricultural worker to think that he has persuaded a peasant to adopt some new farm practice only to learn the next day that the peasant has decided against it
